

Sistema GA-2 GA-2 system

Sistema para la coronación de piscinas desbordantes que permite la construcción de encofrados sencillos, reduciendo el tiempo de ejecución. Consigue una lámina de agua con un nivel perfecto de rebose, homogéneo en sus cuatro lados. Sus piezas no precisan ningún acabado añadido (mientras que otros sistemas con canales de hormigón requieren revestimiento cerámico adicional).

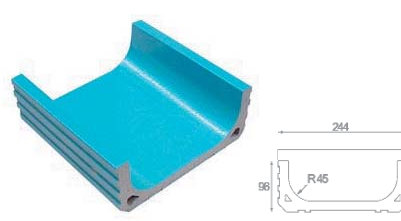

System for the finishing of the edge of level pools. It needs only a simple substructure, so it reduces the construction time. It achieves a perfect water and overflow level, identical on all four sides. Its pieces are both structural and covering (while other systems with concrete channels need considerable more tiling to cover).
