

# SISTEMAS DE CORONACIÓN

## EDGING SYSTEMS

El uso de piezas cerámicas porcelánicas o klinker para el revestimiento completo de una piscina supone una **resistencia total** tanto a los agentes químicos o naturales utilizados en el tratamiento de aguas, como a los productos y métodos de limpieza utilizados en las instalaciones y entornos acuáticos. Además, todas las piezas cerámicas porcelánicas y klinker son idóneas para uso tanto en **exteriores como en interiores**, aportando los elementos necesarios para que las instalaciones cumplan la **normativa**. Aportan, también, calidez y confort a los espacios acuáticos y zonas aledañas.

**ACEPOOL** dispone de una amplia oferta de sistemas de coronación tanto desbordantes como no desbordantes, así como de piezas de base y de acabado, para piscinas que cumplen con todo lo anterior y que proporcionan un sinfín de posibilidades para crear diseños únicos, sea cual sea el estilo o inspiración.

Los sistemas de **coronación desbordantes** son sistemas para piscinas con canal perimetral de rebose compuesto por piezas porcelánicas o klinker fabricadas por extrusión que se pueden colocar sobre piezas de hormigón prefabricado o directamente sobre la estructura del vaso. Sus principales ventajas son:

- La **facilidad de instalación**, simplificando al máximo el proceso desde el hormigonado o gunitado del vaso, requiriendo únicamente superficies de partida planas;
- La **disminución de tiempos** de ejecución y **materiales** necesarios;
- Los acabados de **mayor calidad**.

Las piezas de borde desbordante son recibidas por las piezas de hormigón prefabricado y cumplen una **triple función**:

- **Estructural**: al aportar la inclinación necesaria para generar un borde desbordante tipo playa,
- **De revestimiento**: al ser el último material de acabado de la piscina,
- **De seguridad**: al poseer resistencia al deslizamiento en su superficie y delimitar claramente la ubicación de la arista del vaso mediante un color más oscuro, además de contar con una hendidura que permite servir como asidero.

When our porcelain or clinker tiles are used to line, edge and surround the whole of a pool, they guarantee full resistance to both the chemicals or natural agents used to treat the water and to the cleaning products and cleaning methods used there. All our porcelain and clinker tiles can be used indoors and out, where they fulfil all the necessary requirements of relevant standards. They also bring warmth and comfort to pool and spa facilities and their surrounding areas.

**ACEPOOL** manufactures a wide range of coping systems for overflow and non-overflow pools, in addition to field tiles and special tiles pieces so as to ensure pools able to meet all the above guarantees. Its systems also offer broad design potential, allowing for the creation of one-of-a-kind pools, whatever the style or source of inspiration.

Overflow coping systems are suitable for pools with perimeter overflow channels. Made of extruded porcelain or clinker tiles, they can either be laid on top of precast concrete gutters or else directly round the edge of the pool. Their main advantages are:

- Easy installation, simplifying the process to the full from the moment the inside of the pool is concreted or gunited. All that it requires is a flat substrate;
- A reduction in installation times and materials;
- Better-quality finishes.

The overflow coping tiles are laid on top of precast concrete gutters, where they fulfil a **triple function**:

- Structural support by providing with the necessary sloping edge for overflow pools;
- Cladding because this is the top covering round the pool;
- Safety, thanks to the tiles' non-slip grip and role in marking the edge of the pool with their darker colour and groove, which can also be used as a hand grip.

## TIPOS DE SISTEMA DE BORDE DESBORDANTE TYPES OF OVERFLOW COPING SYSTEMS

Sistema adaptado a piscinas no necesariamente deportivas. Se compone de un borde desbordante y aloja también la rejilla cerámica, bien en su versión rígida o en su versión flexible. Puede utilizarse la cerámica directamente sobre la estructura del vaso o combinarse con las piezas de hormigón B-33 para generar el soporte del borde y el canal perimetral.

Sistema compuesto por una única pieza porcelánica que realiza la función de borde y apoyo de rejilla, para piscina deportiva, capaz de alojar los dos anchos estándar de rejilla de 245 y 195 mm sin necesidad de cortar o adaptar piezas. Se puede colocar directamente sobre la estructura del vaso con las piezas porcelánicas de revestimiento del interior del canal o en combinación con las piezas de hormigón prefabricado (GA-SPA).

Sistema compuesto por una pieza de borde más apoyos de rejilla, que se puede colocar directamente sobre la estructura del vaso con las piezas porcelánicas de revestimiento del interior del canal o en combinación con las piezas de hormigón (GA-SPA). Es capaz de alojar los dos anchos estándar de rejilla de 245 y 195 mm sin necesidad de cortar o adaptar piezas.

### SISTEMA B-33 B-33 SYSTEM

A specially adapted system also suitable for pools not for sports use, made up of overflow coping tiles which can accommodate a rigid or flexible ceramic grating. The coping tiles can be laid directly on the concrete edge of the pool or on top of B-33 supporting precast concrete gutters.

### SISTEMA GA-SPA GA-SPA SYSTEM

A system for sports pools, made up of porcelain tiles that act as both a coping tile and support for a grating. This system can accommodate gratings in two standard widths (245 and 195 mm wide) without having to cut or adapt the tiles. The tiles can be laid directly on the concrete edge of the pool and also used to line the overflow channel or they can be laid on top of precast concrete gutters (GA-SPA).

### SISTEMA FINLANDÉS FINNISH SYSTEM

A system made up of coping tiles that also act as a support for a grating. The tiles can be laid directly onto the concrete edge of the pool and also used to line the overflow channel or they can be laid on top of precast concrete gutters (GA-SPA-U). The tiles can accommodate gratings in two standard widths (245 and 195 mm wide).

## SISTEMAS DE BORDE NO DESBORDANTE NON-OVERFLOW COPING SYSTEMS

Los sistemas de coronación no desbordantes son ideales para aquellas piscinas que bien por dimensiones o bien por circunstancias no requieran de un canal perimetral de rebose. Es posible coronarlas mediante bordes rectos o tradicionales redondeados, que permiten conservar las **posibilidades de diseño y continuidad** de la playa o interior del vaso y coronar de **forma segura** la piscina. Se puede acompañar a estas coronaciones o playas con una **rejilla cerámica** de idéntico acabado para canales de recogida de aguas superficiales y evitar su vertido al vaso.

Sea cual sea el sistema de coronación instalado, los sistemas **ACEPOOL** son garantía de **funcionalidad, durabilidad, seguridad, calidad y diseño**, lo que se traduce en una apuesta segura.

**Non-overflow coping systems** are ideal for pools that do not need an overflow channel due to their size or characteristics. These pools can have straight sides or more conventional rounded ones. With this system, the design of the pool and its poolside areas can be maintained while also ensuring safe edging. The coping system and poolside area can incorporate ceramic gratings in the same finish to drain away surface water and prevent it from running into the pool.

Whichever coping system is used, ACEPOOL's systems offer the assurance of functionality, durability, safety, quality and design appeal.
